

Can I use astah* on Linux or MacOS?

Yes. However we do not officially support Linux or MacOS for astah* (See [System Requirements](#)), so no technical support will be provided for any errors occurred on Linux or MacOS.

How to run astah* on Linux/MacOS

1. Set up Java environment.

2. Unzip astah* download file (zip).

3. Edit Shell script (astah) for your running environment.

4. Add the execute permission to Shell script.

\$chmod 755 ./astah

5. Execute Shell script.

\$./astah

We strongly advise you to use the recommended Java environment to run astah* on these non-Windows platforms.
Please use [Users Community Site](#) for sharing information about running astah* on Linux or Mac OS.
